Quality learning

The students in the 4th grade of highschool of Adriano Tilgher school in the municipality of Ercolano last Tuesday, 5th of March 2024, started a survey on what works best for them when they are learning a subject in school. The purpose of this topic was to have more knowledge on how students learn best so they can feel safer at school and open up about themselves. Through the survey they found out that to have motivation to learn it is important to make students feel safe in the place they are working in through different approaches to the school system. Some examples are: using music as a means for learning a language, as well as movies.

Talking with people that speak the same language we are learning also improves our motivation. This can also be a way for everyone to express themselves and learn about different points of view . Another thing would also improve the students' motivation is the use of modern technologies.
